

ENEL700 Tutorial 6

1. What is pulse amplitude modulation (PAM)? What is the difference between PAM and AM?
2. What is the main difference between pulse width modulation (PWM) and pulse position modulation (PPM)? State one application of PWM.
3. What are the two ways to generate pulse code modulation?
4. What is companding? Explain how companding is adopted in PCM.
5. Explain the advantages and disadvantages of a Delta Modulator.
